

Business Connections

Do AI machines perform tasks better than humans?

Should you be concerned about AI eliminating jobs?

AI and you.

Why you should take Artificial Intelligence personally.

You've probably heard of Artificial Intelligence (AI) and how it will soon have a major impact on your life. Well, get ready—this new technology is flying your way at warp speed. From driverless vehicles to voice and facial recognition, AI is already bringing massive shifts in our social and economic realities.

Join LivePicture President/CEO, Stephen Couchman, as he explores some of those realities along with many possibilities. You'll gain a clear understanding of what Artificial Intelligence is and why it's attracting so much attention.

Couchman will speak about such technologies as machine learning, natural language processing (NLP), computer vision, machine reasoning and why he believes human perception is a bigger driver than Big Data. You'll also learn of key emerging business opportunities and market trends and how to respond to this incredible technology.

About the Speaker:

Stephen Couchman uses cutting-edge technology to help exhibitors who are disappointed with the results of their current trade show efforts and frustrated that they cannot give visitors an experience that makes a lasting impression.

Realizing Life's Potential
